

TUNNELS AND
GREENHOUSES

Filclair Serren Industry

Belgian
manufacturer

The all year
sowing and growing
environment

The unique attractions of our tunnels

new concepts in design for the modern grower

Great looks : at last a greenhouse that is green to blend into the countryside or garden.

Safety: no more flying glass risk to animals, children and adults.

Robust: strong heavy galvanised steel framework. 1,5 m modules with extra steel supports along the full length of the roof.

Tough: factory made covers with tear resistant nylon mesh between 2 layers of PE.

Spacious: straight sides and high eaves give extra room air for plants and growers.

Practical: easy access and ventilation control wide with steel framed doors each end.

Ease of assembly: can be completed as a weekend project... with only 2 x13 mm spanners.

Relocatable: easy to move to a new site either assembled or in component parts.

Versatile: many uses include horticulture, pool enclosures, storage, animal housing...

Flexible: if more growing space is needed... simply add more modules.

Insulation: extends the growing season by 2 or 3 months. The double layer effect creates a micro-climate. Less extreme conditions than single sheets of glass or polythene.

Options: eg. height adjustable staging which fixes to frame or is easily removed. External shade netting easily fitted or removed. Single/double sliding doors...

...and tunnels from
Filclair Serren Industry
are a safer alternative
to high cost glass houses

The splendid

practical designs for the discerning gardener

- 3 m wide | 2m height to ridge
- straight sides with height to eaves 1.6 m
- lengths of 4.5m | 6m | 7.5m | 9m | 10.5m | 12m | 13.5m | 15m ...
- robust 32 mm galvanised steel frame spaced at 1.5 m
- steel frames braced at ground and eaves between each module
- galvanised steel doors 90cm at each end for easy access and ventilation
- base rail and tensioning system for optimum cover tightness
- integral ventilation and air flow design
- green nylon mesh reinforced PE covers
- usually assembled in a day
- corkscrew anchors for grass, earth or concrete base
- single sliding doors optional

The elegant

enter the world of the professional grower through sliding doors

- 4,2m wide | 2.45m height to ridge
- straight sides with height to eaves 1.9 m
- lengths of 6m | 7.5m | 9m | 10.5m | 12m | 13.5m | 15m ...
- reinforced PE covers with tensioning cables
- galvanised steel sliding doors at each end
- manageable size covers tot cover single or double modules
- base rail and tensioning system for optimum cover tightness
- integral ventilation and air flow design
- roof windows available for longer models
- usually assembled in 2 days or less
- anchors to grass, earth or concrete base
- double sliding doors optional

Designed to meet your growing needs

Filclair Serren Industry - established in 1969 and now a leading name in european greenhouse design - is known for attention to quality and for innovation in modern designs. To add to the wide range of aluminium and glass greenhouses, there is an extensive selection of reinforced plastic clad tunnels and greenhouses with galvanised steel frames.

Through annual participation at several national and international trade shows, our reputation spreads. Quality of materials and unique concepts in design combine to set them apart from the ordinary. Where the alternatives present a problem, Filclair Serren Industry has a solution.
